## 0. About GLI Mission

**T**he GLI is an optical sensor designed to observe the atmosphere, ocean, land, and cryosphere.

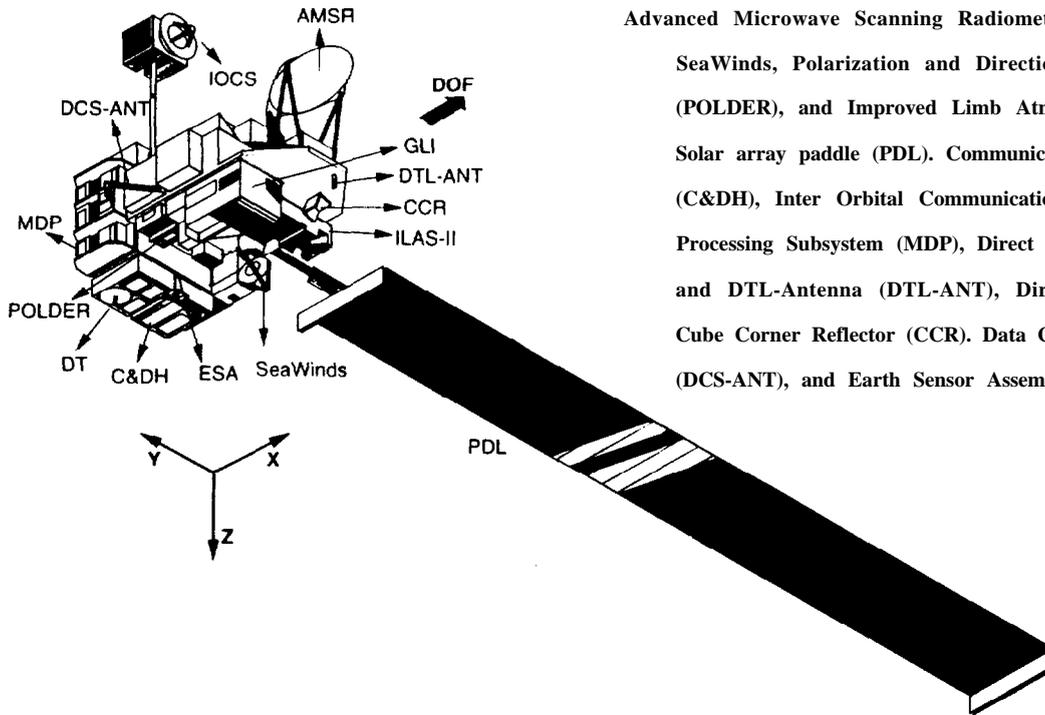

**T**he GLI was first suggested by the Earth Environment Observation Committee (EEOC) of JAPAN in 1990.

**N**ASDA has been developing this since 1993 as a general purpose medium spatial resolution visible-infrared imager to cover atmosphere and land observation as well as ocean color observations.

**T**he GLI will be launched by NASDA H-2 rocket at Tanegashima Space Center in 1999.

# I-1 ADEOS-II Satellite

Advanced Microwave Scanning Radiometer (AMSR), Global Imager (GLI), SeaWinds, Polarization and Directionality of the Earth's Reflectances (POLDER), and Improved Limb Atmospheric Spectrometer II (ILAS-II). Solar array paddle (PDL). Communications and Data Handling Subsystem (C&DH), Inter Orbital Communication Subsystem (IOCS), Mission Data Processing Subsystem (MDP), Direct Transmission for Local users (DTL) and DTL-Antenna (DTL-ANT), Direct Transmission Subsystem (DT), Cube Corner Reflector (CCR). Data Collecting System (DCS) and Antenna (DCS-ANT), and Earth Sensor Assembly (ESA).

## *Categories of Products on GLI Science Mission*

*.Standard products* (by fixed algorithms)

### 1. Production by planning

Processing all data,

Using 4-pixel/ line resampling data for Atmosphere and Ocean

Using 16-days composite data for Land and Cryosphere

### 2. Production by order

Processing only ordered data (10% of all data)

Using Full resolution (1km) data

### 3. Research products (by under research algorithms)

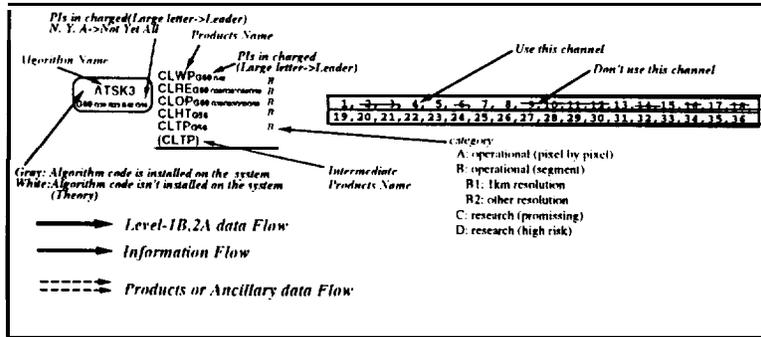

Production by manual operation at EORC
